VICTOR VALLEY HIGH SCHOOL SPORTS NEW LOOK WITH SYNTHETIC TURF

Ray Moore Stadium received surface upgrades to world-class artificial grass by The KYA Group.

This month KYA crews completed work to renovate the Victorville, California stadium by replacing the original natural grass field with high quality synthetic turf.

Southern California's Victor Valley Union High School District began searching earlier this year for an alternative to natural grass. The previous field had recurring issues of increasing water and maintenance costs and was seen as unsafe from holes created by burrowing animals and erosion. With uneven portions of the field, athletes were faced with a higher risk of injury.

KYA's synthetic turf is trusted across the world as the best artificial grass technology possible. Backed by years of research and extensive testing, our turf is a proven surface to make athlete safety the number one priority. "Not only is the field extremely functional in its ability to safely accommodate multiple different sports teams, it's also beautiful," comments KYA Regional Manager Andrea Ivey. "The large Jackrabbit centerfield logo is a serious visual enhancement to the stadium."

The excellent relationship between The KYA Group and their turf manufacturers have helped bring professional-quality sports surfaces to schools across California.

KYA believes that better sports fields are created by first serving the needs of players, and we are honored to continue to work with their team.

About KYA

KYA Active specializes in high performance sports fields, auxiliary fields, sports equipment, field lining, tracks, scoreboards, bleachers, and athletic courts. KYA's main goal is adding value, consistency and quality assurance. KYA has established best practices for selection, installation, and maintenance that allows for each field to be of equally high quality every time.
